

Meh, *national* is my least favorite level of government :)

listen to public

Redistribute wealth

equity

regulate currency

tax and spend

Regulate commerce

market regulation

Peace and security

security

Settle disputes

national (military) security

maintain physical infrastructure that connects (transit, buildings)

utilities

access to resources

Government Digital Service (UK)

public health

Social security nets

Social services (health, ed, assistance, retirement)

Harm reduction/citizen protection

electrical grid

worker safety

regulation (bureaucracy)

cultural support

education

environment protection

legislation

legal framework

diplomacy/international relations

directives for sub-states

education

LEOS

Compute

citizen facing internal

only public sector/public purpose

has a commercial sector equivalent

operates something in the physical world

operates fully digitally

operates fully in VR

Reliability prioritized over agility

specifications and documentation is the authority

implementation is the authority

interoperable

shared internationally

used only in 1 country

Under full control

push

pull

standards

modular, containerized

mutable, configurable

private (encryption)

public

dependent on others

distributed

centralised

open APIs

reflecting policy

open licenses

Hierarchical

P2P vs common

distributed

P2P vs
common

operates
something in
the physical
world

reflecting
policy

open
APIs

mutable,
configurable

pull

dependent
on others

used
only in 1
country

citizen
participating

shared
internationally

open
licenses

implementation
is the authority

centralised

public

operates
fully in
VR

operates
fully
digitally

modular,
containerized

private
(encryption)

Reliability
prioritized
over agility

internal

interoperable

Under
full
control

push

standards

specifications
and
documentation
is the authority

only public
sector/public
purpose

has a
commercial
sector
equivalent

version controlled policy generation

new forms of collab [non corp] vehicles

public digital cultural platforms

participatory urban planning simulation

Tech supported direct democracy

tools for participatory budgeting

Legislation tracking and evidence-based policy

machine readable... legislation

+1 in RCS!

agile implementation of tax policy (not constrained by software)

persistent identifiers

cloud work applications as "library" resources

"omgevingsbel eid" for all legislation, regulation, and policy

interoperability standards

visualization tools to see financial systems and actors

governance tech to make sense of public feedback

new coop financing platofrms

standardized data

public/private talent pipelines/ sharing agreements

governance model experimentation

fostering equity on public digital goods development and governance

ecological impact tracking
